DEPUTY FISHER KILLED

Mokena Deputy Mortally Injured By Auto Bandit This Morning

Walter Fisher, of Mokena, Will County Deputy Sheriff was shot and mortally injured this morning in a running gun duel with an auto bandit and died half hour later in the office of Dr. W. R. Schussler in Orland where he was taken right after being shot.

HOLD UP DOCTOR'S CAR

About 9:30 o'clock this morning as Dr. E. G. MacMahon of Mokena was driving south of town in his Ford coupe he was held up at the point of revolvers by two bandits on foot at the corner where the Mokena road turns onto the Lincoln highway.

The doctor was forced out of the car and robbed of money and valuables following which the bandits jumped in the Ford coupe and drove eastward on the Lincoln highway. Dr. MacMahon went to the farm home of Clarence Cleveland right near the scene of the holdup and telephone to Deputy Fisher and the Cooper & Hostert garage, telling them what had happened. Dr. MacMahon and Mr. Cleveland got in the latter's car and gave chase.

OVERTAKE BANDIT

In the meantime Barney Hostert and Deputy Fisher also gave chase in a Ford car. They took up the trail of the fleeing bandit from the Lincoln way to the hard road that leads north to Orland and soon overtook the bandit driving car No. 23-8513—the number of Doctor MacMahon's car—and without further preliminaries Deputy Fisher started firing at the bandit.

FISHER SHOT—DIES

By this time Deputy Fisher and Mr. Hostert overtook the car at the corner where the gravel road turns on the concrete road known as 143rd street. The two cars were close to each other with Deputy Fisher pumping the lead into the bandit's car when suddenly he fell in the seat exclaiming to Hostert "Help I'm shot" Mr. Hostert drove on to Orland and took the mortally wounded deputy to the office of Dr. Schussler. The latter not being in, Dr. Hedges of Frankfort was called for and he rushed to Orland as fast as the car could go, but deputy Fisher died in the office of Dr. Schussler from the loss of blood before Dr. Hedges could reach him.

BANDIT MAYBE SHOT

After the shooting the bandit was seen to leap from the car and take to a nearby field, and later after Mr. Hostert had driven to Orland, the bandit came back and getting into the abandoned car drove down Keene Ave. All the Cook County Highway police were at once notified. It is that the bandit was hit by some of Deputy Fisher's bullets as he left a trail of blood on the concrete road. Deputy Fisher had shot out the windows of the fleeing car and it is thought that this may be a clue to the capture of the bandit. When Dr. MacMahon was held up there were bandits and when the shooting occurred only one was in the car. Later it was reported that a fellow was seen sitting on a fence with a handkerchief tied on his head. It is that the two have been in a fight after the holdup and the one fellow may have been thrown out of the car. Several New Lenox men report seeing two tough looking fellows walking on the Lincoln highway

heading eastward.

No trace has been found of the missing car or the bandit.

The body of Deputy Fisher was removed to an undertaking room at Summit where the inquest will be held.

Deputy Fisher was 38 years old, married and leaves a widow and two small daughters. He has been engaged in the general store business in Mokena for a number of years and his tragic death has staggered the whole community. He died a hero.

Be a Milk Tippler, Says Dr. Schireson

Peaches and cream complexions of American women have their foundation in a milk diet, according to Dr. Henry J. Schireson, famous Chicago dermatologist and facial plastic surgeon.

Doctor Schireson has won fame by beautifying motion picture stars, musical comedy and vaudeville stars and many society women of America. He transformed Fanny Brice's nose, rejuvenated Eva Tanguay's face, removed sixty-four pounds of adipose tissue from Truly Shattuck in one operation, straightened the cross eyes of the leading lady of Singer's midwinters, and has performed other corrections for making people young and beautiful.

Doctor Schireson has one infallible prescription for the attainment of beauty. It is: "One quart of milk a day, one hour of sunshine, and repeat ad libitum."

"Beauty specialists and cosmetic makers," says Doctor Schireson, "would be driven out of business in a few weeks if all the women of America would drink their quart of milk a day."

"Babies and children have complexions of angels for the reason that they are fed largely on milk. Milk used externally or internally is a beautifier. Anna Held, I believe, was the first actress who adopted the milk bath. While this was a novelty at the time, and her press agent undoubtedly made the most of it, the principle in itself was sound. But a beauty secret of even more value is the daily quart of milk taken as a part of the diet."

"The milk-fed girl is easily distinguished by the velvety texture and the healthy color of her skin. Milk is a wonderful body builder, because it contains every structural element. It is, in a way, an elixir of life."

"Authorities agree that milk is the most nearly perfect food but it is an extremely delicate one as well. Heat sufficient to kill all bacteria is the essential of absolutely pure and sterile milk. One of the advantages of evaporated milk, which is simply fresh cow's milk with sixty per cent of the water removed, is that it is entirely sterile and is more easily assimilated than ordinary market milk."

"Milk is mentioned forty-seven times in the Bible. The Promised Land of the Israelites was said to flow 'with milk and honey' and Ovid graded milk as second only to nectar, the drink of the gods."

Odd Use for Elephants

Elephants were used to keep the crowd of curious natives from the airplane of an air exploring party in India recently, but the animals had to be watched to keep them from sitting on the plane.

Clean Electric Bulbs

The dry dust and dirt that accumulates on electric lamp bulbs and inside electric lighting fixtures often causes a decrease of illuminating value of 30 per cent within three months and where soot and oily dust are found the results are even worse. Therefore, all electric lamp bulbs and fixtures should be cleaned thoroughly and regularly.

Hot Springs and Geysers

The hot water ejected by hot springs and geysers does not come from deep within the earth, but is surface water that has trickled down through underground channels and become heated by steam from subterranean lava beds.—Science Service.

Barber Philatelist

A London barber spends all his odd moments collecting stamps, and the walls of his shop are papered with stamps of all descriptions. He is also an art critic, his advice being sought when a person desires to purchase what is claimed to be a valuable picture.

Thumb Not "Finger"

Strictly speaking, the thumb should not be referred to as a finger and we have on each hand four fingers and a thumb. The term that refers to all five of the divisions of the hand is digit. However, the word "finger" has come to be used loosely in reference to the four digits and the thumb.

Pedestrian Greatest Victim of Automobile Accidents

THE PEDESTRIAN is the greatest sufferer in automobile fatalities, according to records analyzed by the Stewart-Warner Safety Council for the prevention of automobile accidents. No complete record is available for the United States as a whole, but a report based on 3,023 auto fatalities occurring in the first seven months of 1925, covering a population of thirty-one million, is significant. Two thousand of these 3,023 fatalities have been classified according to type. Sixty-eight per cent of the victims were pedestrians, 11.5 occurred with another motor vehicle; 7 per cent with horse vehicles, 4.2 with fixed objects such as lamp posts, 3.5 per cent with street cars, 2.7 with railway trains and 1.4 per cent with bicycles. The remaining 6.8 per cent involved no collision. The small proportion involving railway trains is encouraging and no doubtless due to the gradual abolition of unguarded grade crossings. The menace to the pedestrian, however, is alarming, and calls for greater care on his part in crossing streets and on the drivers for more careful driving.

One Death Per 1000 Autos in a Year Is Record of U. S.

1 Person is Killed and 28 Injured annually for every 1000 Auto- mobiles in this Country

ONE out of a thousand is the relationship between the annual automobile fatalities and the number of motor vehicles in this country, according to the Stewart-Warner Safety Council for the prevention of automobile accidents, which has undertaken a strenuous campaign of automobile safety and accident prevention.

And for every fatality there are at least 28 accidents serious enough to get on record. This does not take into consideration minor sprains and bruises or people suffering from nervous shock as the result of being in an automobile accident.

To appreciate what a vast army of killed and injured is annually conscripted by the reckless motorist and careless pedestrian, a comparison may be made with American casualties in the great war. Over a third as many people are killed annually by the automobile as there were American soldiers killed on the field of battle during the entire war, while the number injured each year is nearly three times as great as the number of our boys who were wounded throughout the war.

Emergency Pantry Meets Home Need

By META H. GIVEN

(Home Economist.)

Efficiency and economy go hand and hand in the home as well as in the business world. The emergency pantry, latest innovation in the cuisine of the modern housewife is particularly indicative of the truth of this statement.

This new sort of pantry—it may just be a shelf in the regular larder—does away with that bugaboo of the home maker, the surprise guest. Every woman has had the experience of welcoming an unexpected visitor when supplies were at low ebb and has searched high and low to find something presentable to put on the table. The emergency shelf in the pantry does away with such worries in short order.

A can opener and presto—a veritable banquet can be prepared in a few minutes. The housewife may have her choice of many excellent meats, corn, tomatoes, mushrooms. If she is short of milk or cream, a can of evaporated milk, which is simply fresh cow's milk sterilized in the can and with sixty per cent of the water removed will do the trick. In fact she may have two hundred or more savory dishes ready to her hand.

When the surprise guest does arrive the hostess naturally wishes to be hospitable. She doesn't want to be tied to the kitchen range half the afternoon. She wants to entertain as she has been entertained.

It isn't possible if she has to phone frantically for the butcher, the grocer and the baker.

But that's only one of the places where the emergency pantry comes in. Backed by a well-stocked emergency shelf, the wife can get together a splendid luncheon or dinner in a jiffy. The spontaneous wish that comes at the last moment to informally invite a few friends for lunch can be gratified at once with the aid of the new pantry.

Afternoon tea for the bridge club is an equally easy matter. A glass of preserves or jelly, a platter of bread and butter, tea, and a dish of cookies will meet the ordinary demands of the casual caller and a can of evaporated milk will answer the milk or cream need.

ON GUARD AGAINST FARM CROOKS

With every constructive movement for the improvement of agriculture, one is likely to find men who will attempt to capitalize it for their own personal benefit. This may take the form of shipping in poor and unprofitable livestock to palm off on unsuspecting farmers, or it may sometimes be selling fair to good livestock at exorbitant prices under promise of taking back some of the offspring at high figures.

There are several instances where the college of agriculture through its county agent system has co-operated in heading off the introduction of undesirable or extravagantly priced livestock. In other instances the state bankers association, through its agricultural committee or the secretary's office, has sent warnings to its member banks relative to individuals or firms operating on an unsound basis. It is as important to head off undesirable and unprofitable investments as it is to encourage constructive and profitable.

—Banker-Farmer.

Caloric Requirements of the Child

DIETITIANS declare that the average boy or girl of four years should receive about forty calories a pound of body weight per day. The average weight of a child of four years is forty pounds. Therefore the total caloric requirement would be approximately 1,600 calories. Caloric is merely the name for a certain measure of heat derived from the burning of food.

Necessarily, the caloric requirement of the child is dependent on his temperament, size, and the way he plays. A child who plays hard and long requires more nourishment than one who leads a quieter life. Rate of growth also has a bearing on caloric requirements. The child who is growing rapidly should be given more food to meet his caloric needs than the boy or girl whose growth is normal.

Mothers know the daily diet should consist of the essential foodstuffs, protein, carbohydrates, fats, minerals and water. The important thing for her is to learn the foods that contain these essentials in a balanced diet. Below is a well-balanced menu for any child six years old compiled by an authority on home economics.

ONE DAY'S MENU FOR SIX- YEAR-OLD CHILD.

Breakfast.	
6 stewed prunes	120 calories
½ cupful cream of wheat	85 calories
Served with half cream (6 tbsp.) and half evaporated milk	140 calories
1 slice buttered toast	150 calories
1 cup cocoa made with evaporated milk	150 calories
645 calories	
Luncheon at School.	
Baked potato and butter	200 calories
½ cupful spinach	25 calories
1 baked apple (1 tbsp. sugar, ½ tsp. butter)	200 calories
1 glass milk	160 calories
1 slice bread buttered with ½ tsp. butter	100 calories
585 calories	
Afternoon Luncheon at School.	
1 orange	100 calories
Dinner.	
1 small piece broiled steak (2½ x 2½ x ½)	75 calories
½ cupful mashed potato	100 calories
2-3 cupful lima bean soup made with evaporated milk	75 calories
1 glass milk, orange drink	160 calories
510 calories	
Total 1,840 calories	

Children often become wearied of drinking plain milk. Mixing their milk with fruit juices is a welcome change. Following is the recipe for a refreshing milk drink: Mix ¾ cupful orange juice, ¼ cupful evaporated milk, three teaspoonfuls of sugar, ½ teaspoonful of lemon juice and a few grains of salt. Shake well in a fruit jar before serving.

Cranberry Cultivation

Out of a total of 29,964 acres of cranberries in the United States, 14,000 are in Massachusetts and 13,000 in New Jersey. Cranberries are little grown outside of the United States. About 100 acres are being cultivated in Nova Scotia and they have been tried with little success in Norway, the Netherlands and Denmark.

Frankfort Town Reports

ROAD AND BRIDGE FUND

Town of Frankfort

State of Illinois, County of Willas—

The following is a statement by William Lankenau, Treasurer of the Town of Frankfort in the County and State aforesaid, of the amount of public funds received and expended by him during the fiscal year just closed, ending on the 30th day of March, 1926, showing the amount of public funds on hand at the commencement of said fiscal year, the amount of public funds received and from what sources received, the amount of public funds expended and for what purpose expended, during said fiscal year, ending as aforesaid.

The said William Lankenau, being duly sworn, doth depose and say, that the following statement by him subscribed is a correct statement of the amount of public funds on hand at the commencement of the fiscal year above stated, the amount of public funds received and the sources from which received, and the amount expended, and purchases for which expended, as set forth in said statement.

WILLIAM LANKENAU

Subscribed and sworn to before me this 5th day of April, 1926.

Frank J. Kohlhaugen, Justice of the Peace

Jay Walker to Blame for Half of the Deaths by Auto

MANY a motorist whose car has figured in a fatal accident will be able to present a clear sheet to Saint Peter when his time comes, when one considers all the contributing factors outside of the driver's own fault. A total of 1,390 auto fatalities on record with the Stewart-Warner Safety Council for the prevention of automobile accidents, covering a period of seven months, shows that in 727 cases the fault was clearly the pedestrian's and cannot be put down to the driver, the weather or unavoidable circumstances.

The careless pedestrian's footsteps lead him to the grave by six distinct routes, says the Safety Council, and the most travel-worn of these is jaywalking. Sixty-two per cent of the 727 auto fatalities just referred to were due to straggling across busy streets without using the intersections. Children playing in the streets was responsible for 31 per cent and coasting for another 8 per cent. Confusion on the part of the pedestrian, not hearing whistles and turning back in his tracks, brought about 9 per cent of these 727 deaths, while physical disability and intoxication rate 8 and 2 per cent respectively.

Electric Light Rates Reduced!

On May 1, 1926, the Following Reduced Rates will be in effect for Customers of Public Service Company of Northern Illinois

GENERAL LIGHTING SERVICE

- 9 cents net per kilowatt hour—for initial consumption in the month
- 8 cents net per kilowatt hour—for secondary consumption in the month
- 6 cents net per kilowatt hour—for all additional consumption in the month

This, the eighth reduction in electric rates since the Company's organization in 1911, is made possible by increased usage of electricity by our residential and commercial customers, and by further

economies of Central Station Operation. These new reduced rates assure you the convenience and luxury of additional electricity for your home or business for the same money.

How Your Dollars Buy More Electric Light

*Note—This rate will be in effect throughout the entire territory served with Electricity by this Company, except in five towns, where the rate for initial consumption in the month will be 10 cents net per kilowatt hour.

SUCCESS IN AMERICA AN OPEN HIGHWAY

How Four Boys of Humble Origin
Have Become Chiefs of the
Greatest Financial Organiza-
tion in the World.

Broad highways of achievement are wide open to all in America no matter how humble their beginning. It is brought out by a writer in Forbes Magazine, telling of the successive elevation of poor boys to the chieftainship of the most powerful association of financial power in the world.

"Nowhere is opportunity so democratic as in caste-free America, nowhere is recognition for faithful service so little conditioned by inherited position and wealth," the article says. "The bounty of America in bestowing her rewards of great success upon those of modest origin is again notably manifest in the rise of Oscar Wells to the presidency of the American Bankers Association.

"The son of a tanner, John H. Puellcher, was elected to this eminence in 1922. Circumstances ended his public schooling in the seventh year and he went to work in a carpet store in Milwaukee. At sixteen he entered a bank as a clerk, rising step by step until he became president. Recognition of his abilities as a banker and civic service through public education in sound economic understanding brought him the highest reward from his profession.

"A former country school teacher, Walter W. Head, born in a farm hamlet in Western Illinois, was elected president of the association in 1923. He gave up teaching and a salary of \$75 to enter banking at \$40 a month in a small Missouri town. He subsequently became president of a bank in Omaha, the largest in Nebraska and a dozen neighboring states. The position he occupied in advancing agricultural welfare during the period of depression led to his being called the 'Granger President of the American Bankers Association.'

"From Irish immigrant lad to supreme head of banking in America epitomizes the career of William E. Knox, president of one of the largest savings banks of the country in New York. His business career began as an office boy in a publishing house, and he later entered the bank as a clerk. His experience with humble people in their problems of personal finance and his inculcation of economy in all matters attracted country-wide attention.

"Oscar Wells, who rises in 1925 as successor of these men, was born in an old weather-boarded log cabin house in the Missouri River bottoms of Platte County, Missouri. He became an orphan when three years of age, losing his parents in an epidemic that ravaged the countryside. He passed under the care of an uncle, head of a small country bank in Platte City, a town of a few hundred inhabitants, growing up on a farm and receiving his early education in a rural school. He later entered Bethany College, West Virginia, but at the end of his junior year he had to quit college and go to work in the bank."

His subsequent career was one of steady progress, first to higher positions among small country banks, then to larger city banks in Texas, where he rose to the top. In 1914 he was chosen first governor of the Dallas Federal Reserve Bank and served through the opening period of the establishment of that institution. He resigned to become president of a bank in Birmingham, Alabama, which has grown under his administration to be one of the largest and most successful institutions in the South.

HUGE GROWTH IN SCHOOL SAVINGS

New York.—School savings in the United States for the year 1924-1925 increased in aggregate bank balances by \$5,500,000, with a growth of 630,000 in the total number of pupils participating. It is shown in reports made to the American Bankers Association, which declares that the returns encourage belief in the permanence of school savings as a part of the educational program in the public schools.

During the year the number of reporting school savings systems increased from 633 in 742 districts to 760 in 1,557 districts, the number of schools from 9,080 to 10,163, the number of pupils participating from 2,236,326 to 2,369,497, the deposits from \$14,991,535.40 to \$16,961,560.72 and the bank balances from \$20,435,144.64 to \$25,913,431.15, says W. E. Albright, in charge of the Association's savings activities.

Since 1920, the first year for which comprehensive statistics are available, the number of schools having school savings banking has increased 271.4 per cent, the enrollment in school savings districts 278.9 per cent, participation 72.2 per cent, deposits 506.1 per cent and bank balances 516.8 per cent.

BANKERS SURVEY STATE BANK LAWS

Find That Movement for State
Guaranty of Bank Has
Gone Into Eclipse

New York.—A survey of state banking laws conducted by the State Bank Division of the American Bankers Association shows marked progress toward greater uniformity and more efficient bank supervision. It is declared by Frank W. Simmonds, in charge of the division, in a statement giving the results of the investigation. He says that the movement for state guaranty of bank deposits appears to have gone into eclipse.

"The division has urged that the office of bank commissioner be freed from politics and all other functions of state government and tenure be made more secure with sufficient compensation and discretion to attract men of outstanding ability," Mr. Simmonds says. "Gratifying progress has been made during the past year in important bank legislation in many states. Idaho, Wyoming and Oregon led the list by adopting entirely new modern banking codes, while Texas and Montana have new codes in preparation."

Uniformity Among State Laws.—The survey shows that it is generally agreed there should be a high degree of uniformity among the states in laws dealing with certain fundamental principles of bank organization, regulation and supervision, and that there is a strong tendency in this direction. We find a very definite trend toward increasing the minimum capital requirements of banks to \$15,000; creation of banking boards to act in an advisory capacity with the state bank commissioner; and legislation empowering bank commissioners to take complete charge of insolvent banks and to liquidate them, as distinguished from liquidation through the courts.

"We find also a trend toward legislation providing for closer supervision and regulation of building and loan associations; more equitable taxation of bank stock; legislation providing for merger, conversion or consolidation of banking institutions; the legalizing and regulating of what is known as 'departmental banking'; broadening the field for investment of funds of savings banks and trust companies, and increasing the power of the bank commissioner as to granting or denying charters for new banks, and authorizing his making reasonable rules and regulations governing bank management and prescribing penalties for the violation thereof.

"Additional general characteristics of state bank legislation are for increasing the compensation of the bank commissioner and lengthening his term of office of four, five or six years, with power to appoint necessary deputies and examiners; legislation providing for the reduction of mandatory bank calls to three and reducing the number of examinations required by law annually to one; making issuance of worthless checks a misdemeanor; limiting or prohibiting an officer or director of a bank borrowing from his bank unless his collateral is approved by a majority of the board of directors, and limiting or prohibiting the opening of branch banks.

Eclipse of Guaranty Movement.—The question of state guaranty of bank deposits appears this year to have passed into an eclipse, so far as the extension of the idea is concerned, notwithstanding the fact that state guaranty laws were recommended by the governors of two states, and bills were introduced in several of the states, all of which were defeated. The general tendency, so far as state guaranty of deposits laws are concerned, is distinctly the other way, the indications being that several states now having guaranty laws are trying to free themselves from this legislation. Oklahoma has abandoned the plan of state guaranty of deposits, and this year the South Dakota legislature has repealed the state guaranty law and has referred the repeal to the people at the next general election for ratification."

BANKERS RAISE FUND OF \$500,000 FOR EDUCATION

A fund of \$500,000 to endow scholarships and research in economics in American colleges was recently established by the American Bankers Association in celebration of its Golden Anniversary. The intention of the Foundation is to promote education in the direction of sounder general economic understanding. Half the total sum represents subscriptions by the American Bankers Association, the American Institute of Banking and individual bankers, and the other half quotas assigned to bankers in each state. The Association will raise \$250,000 from its reserve funds, and the American Institute of Banking, through individual subscriptions from its members, who are chiefly clerks in the banks, subscribed \$25,000. Numerous subscriptions of \$5,000, \$2,500 and \$1,000 each were made by individual bankers in all parts of the country.

Caravan of Death 660 Miles Long Is Nation's Auto Story

A CARAVAN of death and suffering 660 miles long is what the annual automobile casualties of the United States would form if placed in one continuous line. From New York to Detroit, painful mile on painful mile, this ghastly and pathetic human chain would reach. This graphic picture, prepared by the Stewart-Warner Safety Council for the prevention of automobile accidents, tells its own story. Twenty-two thousand killed annually by automobiles and 600,000 injured is the present toll caused by thoughtless drivers and careless pedestrians. Only a small per cent of the accidents are due to defects in the cars or can rightly be called unavoidable.

An Extraordinary Value

Radiola 20 is an entirely new 5-tube tuned radio frequency set which sells for \$102.50 without accessories.

Equipped with tubes and new dry battery genuine RCA power Radiotron, this set gives wonderful reception and sells at the low figure of \$115.00.

RADIOLA 20 IS PRODUCED BY THE MAKER OF THE FAMOUS "SUPER-HET".

Convenient time payments if you wish.

Always An Organization for Service

The Origins of Fashions

WHERE do the most pronounced changes in men's fashions originate? London or New York? Are they decided upon at some tailors' convention or are they the whim of some Fifth Avenue dandy, as he strolls up and down the boulevard? None of these. The real despot on fashions in America today is the young fellow on the college campus. He demands color, variety, originality, and he usually finds them.

Perhaps it's the loud-checked flannel shirt, or the bright-yellow slicker which, covered with autographs and Greek letters, pervades the campus just as much on sunny as rainy days. It may be simply a fashion of wearing one's coat collar turned up or trouser cuff turned down; whatever it is the college youth claims it as his own only to find that in a few months or even weeks it has been adopted all over the country because it is "collegian."

The fad for bell-shaped, flapping trousers started at Oxford, as did the craze for flannel in pastel shades of rose, lemon and lavender.

Colored hat bands, Roman striped belts and emphatic four-in-hands all were born on the campus and later adopted throughout the country.
